CLAIMS

1. A process for preparing a compound of the following formula (I):

(I)

5

15

wherein X is a straight or branched C_1 - C_{20} -alkylene chain, said process comprising reacting a compound of the following formula (II):

wherein M is a hydrogen atom or a cation of an alkaline or alkaline earth metal, an onium cation with a compound of the following formula (III):

$$O_2NO-X-COY$$
 (III)

wherein Y is OH, Cl, OCOOR, OCO-X-COY wherein R is a C_1-C_6 20 alkyl and X is as defined above.

2. The process according to claim 1 wherein X is a straight or branched $C_1\text{--}C_6$ alkyl chain.

- 3. The process according to claim 1 wherein \boldsymbol{X} is a propylene chain.
- 4. The process according to claim 1-3 wherein Y is OH and M is a hydrogen atom.
 - 5. The process according to claim 4 wherein the reaction is carried out in aprotic dipolar solvents, in the presence of a dehydrating agent selected from: dicyclohexylcarbodiimide
- 10 (DCC); or DCC and an aminopyridine; Amberlyst-15; diethtyl azodicarboxylate and triphenylphosphine.
 - 6. The process according to claim 1-3 wherein M is Na or K and Y is Cl.

15

- 7. The process according to claim 6 wherein the reaction is carried out in dipolar aprotic solvents selected from terahydrofuran, dioxane, tert-butyl methyl ether.
- 20 8. The process according to claims 1-3 wherein M is an onium cation and Y is Cl.
 - 9. The process according to claim 8 wherein the onium cation is selected from tetralkylamonium or
- 25 tetralkylphosphonium and the reaction is carried out in aprotic solvents selected from toluene, chlorobenzene, tetrahydrofuran, tert-butyl methyl ether.
